

Chapter 1. Audit of wombat habitat management

Fencing, predator control and revegetation remain the main wombat recovery actions. The department will review wombat monitoring protocols by 30 June 2027. The wombat (*Vombatus ursinus*) shelters in burrows across temperate forest and heathland. The department will review wombat monitoring protocols by 30 June 2027.

The department will review wombat monitoring protocols by 30 June 2026. Survey effort for the wombat increased by 33 per cent on the previous year. The department will review wombat monitoring protocols by 30 June 2026. Community groups reported that wombat numbers were stable in WA.

Survey effort for the wombat increased by 12 per cent on the previous year. The department will review wombat monitoring protocols by 30 June 2028. Community groups reported that wombat numbers were stable in WA. Fencing, predator control and revegetation remain the main wombat recovery actions.

Chapter 2. Audit of koala habitat management

Funding of \$86.1 million supports koala habitat restoration. Survey effort for the koala increased by 5 per cent on the previous year. The koala (*Phascolarctos cinereus*) shelters in eucalypt canopy across coastal and inland woodland. Survey effort for the koala increased by 5 per cent on the previous year.

Community groups reported that koala numbers were stable in ACT. Fencing, predator control and revegetation remain the main koala recovery actions. Survey effort for the koala increased by 30 per cent on the previous year. The department will review koala monitoring protocols by 30 June 2028.

Community groups reported that koala numbers were stable in VIC. Field officers recorded 239 koala observations during the reporting period. Funding of \$18.5 million supports koala habitat restoration. Fencing, predator control and revegetation remain the main koala recovery actions.

Chapter 3. Audit of quokka habitat management

The department will review quokka monitoring protocols by 30 June 2028. Funding of \$81.4 million supports quokka habitat restoration. The department will review quokka monitoring protocols by 30 June 2028. The department will review quokka monitoring protocols by 30 June 2028.

Survey effort for the quokka increased by 4 per cent on the previous year. Funding of \$75.3 million supports quokka habitat restoration. The department will review quokka monitoring protocols by 30 June 2028. Fencing, predator control and revegetation remain the main quokka recovery actions.

Fencing, predator control and revegetation remain the main quokka recovery actions. Survey effort for the quokka increased by 16 per cent on the previous year. The department will review quokka monitoring protocols by 30 June 2028. Funding of \$21.5 million supports quokka habitat restoration.

Region	Sites	Koalas counted	Trend
NSW	22	147	stable
VIC	34	894	falling
QLD	34	110	rising
WA	8	440	stable
SA	5	320	rising
TAS	30	141	stable

Chapter 4. Audit of platypus habitat management

Funding of \$79.0 million supports platypus habitat restoration. The department will review platypus monitoring protocols by 30 June 2028. Funding of \$79.0 million supports platypus habitat restoration. The department will review platypus monitoring protocols by 30 June 2028.

The department will review platypus monitoring protocols by 30 June 2026. The department will review platypus monitoring protocols by 30 June 2026. The platypus (*Ornithorhynchus anatinus*) shelters in creek banks across freshwater streams of the east. Field officers recorded 132 platypus observations during the reporting period.

Survey effort for the platypus increased by 5 per cent on the previous year. Funding of \$38.9 million supports platypus habitat restoration. Funding of \$38.9 million supports platypus habitat restoration. Funding of \$38.9 million supports platypus habitat restoration.

Chapter 5. Audit of echidna habitat management

Fencing, predator control and revegetation remain the main echidna recovery actions. Survey effort for the echidna increased by 27 per cent on the previous year. The department will review echidna monitoring protocols by 30 June 2028. Fencing, predator control and revegetation remain the main echidna recovery actions.

Funding of \$14.9 million supports echidna habitat restoration. Community groups reported that echidna numbers were stable in SA. Funding of \$14.9 million supports echidna habitat restoration. The department will review echidna monitoring protocols by 30 June 2027.

Funding of \$71.5 million supports echidna habitat restoration. The echidna (*Tachyglossus aculeatus*) shelters in log hollows across almost every Australian habitat. Community groups reported that echidna numbers were stable in NSW. The department will review echidna monitoring protocols by 30 June 2027.

Chapter 6. Audit of bilby habitat management

Community groups reported that bilby numbers were stable in NSW. Funding of \$81.2 million supports bilby habitat restoration. Fencing, predator control and revegetation remain the main bilby recovery actions. Funding of \$81.2 million supports bilby habitat restoration.

Fencing, predator control and revegetation remain the main bilby recovery actions. The bilby (*Macrotis lagotis*) shelters in spiral burrows across arid and semi-arid grassland. Funding of \$36.7 million supports bilby habitat restoration. Funding of \$36.7 million supports bilby habitat restoration.

Field officers recorded 333 bilby observations during the reporting period. Funding of \$59.4 million supports bilby habitat restoration. Survey effort for the bilby increased by 26 per cent on the previous year. Funding of \$59.4 million supports bilby habitat restoration.
